

MailFrontier Archiving Module

Provides comprehensive storage and retrieval of archived emails, including the following benefits. Users can

- Store all email or just messages delivered to employees' inboxes (not junk)
- Archive emails on either the email appliance or a separate filing system
- Select the retention period for the archived email
- Know archived messages are automatically purged following the specified retention period
- Access archived emails easily through MailFrontier's administrative interface

AXS-One Compliance Platform™

Additionally, organizations can purchase the AXS-One Compliance Platform for operational improvement, compliance-focused archive management, and legal discovery, which leverages MailFrontier to ensure only selected emails are quarantined.

Email Archiving

Email has become the most relied upon means of business communication. With this development has come the need to archive these digital communications. Copies of emails must be maintained for easy reference, for compliance with specific regulations, and for legal discovery.

Emails can hold important work product, work policies, intellectual property, and other information critical to the organization. It is important to be able to find and access the ideas and information contained in these communications.

Legislative regulations have been imposed, such as HIPAA, GLBA, and SOX, which require that sensitive information remain secure. Archived emails can provide proof of compliance with these regulations. Emails can also be required for legal discovery in lawsuits or other litigation. Therefore, having a comprehensive archiving system can significantly reduce litigation risks and legal costs.

MailFrontier Email Archiving Options

MailFrontier is the leading provider of email security and compliance solutions that protect organizations against threats, such as spam, phishing, and viruses; identify and enforce regulatory and corporate compliance policies; and enable consolidation of email infrastructure.

MailFrontier offers two email archiving options: MailFrontier Archiving module and a leading archiving solution from partner AXS-One. Both of these options seamlessly integrate with MailFrontier Gateway and help to keep an organization compliant with regulatory requirements and best business practices.

MailFrontier Archiving Module

With MailFrontier Archiving module, archive settings are automatically added to the MailFrontier Gateway easy-to-use, Web-based administrative interface. In the Policy and Compliance section of the interface, on one screen administrators can select

- What email to store
- Where to archive the emails
- How long the emails should be retained

Administrators can select whether to archive all inbound emails or just the non-threat emails that are delivered to users' inboxes. Then administrators can select where the archived emails are to be stored. This can be on the MailFrontier Gateway or to a separate storage device. The last option under Archive Settings is how long the emails should be archived. The administrator can set the retention period and at the end of this period the archived emails are automatically purged.

Once emails are archived, they can be easily accessed through the Auditing section of the administrative interface. Administrators use the same simple search functions as they would to find an email for auditing purposes. However, with the MailFrontier Archiving module, in addition to the auditing information, administrators can search, view, and retrieve the email.

MailFrontier Policy Management and Archiving

Whether using MailFrontier Archiving module with MailFrontier Gateway's robust policy management or the specialized policy management offered in the MailFrontier Compliance™ module, AXS-One archiving can be used as an automated action option that supports regulatory and corporate compliance.

Setting Policies

Through MailFrontier Gateway and MailFrontier Compliance module, emails requiring storage can be identified based on specified content, attachments, record matching, dictionary checks, and other email features. Email is evaluated for these characteristics and remediation actions are applied to selected groups, domains, or users.

Archiving as a Policy Action

Using archiving as a policy action simplifies and enforces policy management. Applying archiving as an automated action to policies eliminates the need for user intervention, removing the burden from employees and ensuring that important information is safely stored.

MailFrontier's Easy Archiving Settings and Email Retrieval

The screenshot displays the MailFrontier Gateway Appliance interface. The top navigation bar includes icons for Server Configuration, Anti-Spam, Anti-Virus, Auditing, Policy & Compliance, User & Group Management, Junk Box, and Reports & Monitoring. The main content area is divided into several sections:

- Compliance and Archiving:** A sidebar menu with options for Standard Module (Filters, Groups, Dictionaries, Approval Box), Compliance Module (Encryption, Record ID Definitions, Predefined Dictionaries), and Archiving Module (Settings).
- Message Audit:** A window showing the audit trail for a message with ID 20051228060300112345. It lists actions such as 'Arrived Into Gateway from', 'Direction', 'Arrival Notes', and 'Audit Trail' with timestamps and user information.
- Message Details:** A window showing the header information for the message, including Subject, From, To, Date Received, Message Size, Threat, Category, and Attachments.
- Message Content: Archived:** A window showing the content of the archived message, which is a text-based email from Casino Del Rio.

MailFrontier's Partnership with AXS-One

MailFrontier has partnered with AXS-One, a leading provider of high-performance records compliance management software solutions, to deliver a complete policy-based email security and archiving solution for organizations.

AXS-One provides powerful archive management with fast, intelligent searches and retention period settings by content or user. In addition, AXS-One archiving is added as a policy enforcement action in MailFrontier Gateway's robust policy management and MailFrontier Compliance module settings. As a policy enforcement action, AXS-One archiving can be used to archive only emails that meet specified policy criteria. Archiving as a policy action ensures only messages that need to be archived are stored, saving customers resources and costs.

MailFrontier Archiving Keeps Email Accessible and Secure

Whether using MailFrontier Archiving module or AXS-One, when combined with MailFrontier Gateway it is easy for organizations to archive inbound and outbound email that is identified as legitimate and remove unwanted email, such as spam and viruses, from being archived. This combination keeps important information accessible and secure and offers a powerful solution for regulatory compliance and legal discovery.
