provides a range of integrated enforcement options including
  - Encrypt
  - Archive
  - Block
  - Delete
  - Review
  - Copy
  - Quarantine

## All Organizations Have Email Compliance Requirements

All organizations are faced with the challenge of meeting email compliance requirements, whether regulatory compliance from government legislation, such as HIPAA, GLBA, or SOX; industry standards; or corporate compliance, such as preventing offensive emails or protecting intellectual property. With these various compliance requirements, encryption and archiving options alone are not enough. Organizations must have robust policy management and enforcement options to meet the range of compliance needs.

## How Regulatory and Corporate Compliance Apply

<b>Regulatory</b> <ul style="list-style-type: none"> <li>• Government Legislation</li> <li>• Industry Standards</li> </ul>	Do you need to <ul style="list-style-type: none"> <li>• Comply with specific government regulations, such as HIPAA, GLBA, SOX, or other federal or state legislation?</li> <li>• Comply with industry communication standards?</li> <li>• Limit the distribution of information?</li> </ul>
<b>Corporate</b> <ul style="list-style-type: none"> <li>• Email Policies</li> <li>• Confidential Information Protection</li> </ul>	Do you need to <ul style="list-style-type: none"> <li>• Stop emails containing offensive or harassing language?</li> <li>• Block attachments of a particular type or size?</li> <li>• Issue disclaimers or other automated information in specific circumstances?</li> <li>• Prevent employees from emailing your intellectual property or customer lists to competitors?</li> </ul>

## Making Compliance Policies Easy

MailFrontier is the leading provider of email security and compliance solutions that protect organizations against threats, such as spam, phishing, and viruses; identify and enforce regulatory and corporate compliance policies; and enable consolidation of email infrastructure. MailFrontier makes compliance easy with MailFrontier Gateway™ products and the MailFrontier Compliance™ module.

## MailFrontier Compliance Module

The MailFrontier Compliance module provides intelligent identification that analyzes all message components and recognizes predefined and custom records (such as SSN, customer ID), words/phrases from compliance dictionaries, and other compliance indicators. Because MailFrontier integrates with an organization's existing directory system, these policies can be applied to the entire organization, a group, or individual.

MailFrontier goes beyond matching records, keywords, and phrases with MailFrontier Disguised Text Identification™, which detects information that has been accidentally or purposefully altered.

Administrators can inconspicuously monitor the effectiveness of the compliance policies through notification emails, approval boxes, blind copies of emails to administrators, and compliance reports. Administrators also can select the enforcement option that best fits the compliance situation, including encrypt, archive, block, delete, review, copy, or quarantine.

## Easily Apply Compliance Policies

MailFrontier's Web-based administrative interface provides centralized management that makes it easy to create inbound and outbound policies for regulatory and corporate compliance on just one screen. Enabling compliance policies could not be more simple and effective.

In the MailFrontier Compliance module, from a single screen the administrator can

1. Select the component of the email to be searched and the attribute that indicates a policy violation,
2. Determine the enforcement action that should be taken if the attribute is found, and
3. Choose the groups to which the policy should be applied.

### Message Components & Attributes

To begin, select the part of the message to which you want to apply the compliance policy, such as from, to, body, or attachment. Then determine the compliance policy attribute which indicates a violation. Pick from options including record matching, compliance dictionaries, and disguised text identification.

### Enforcement Actions

Once the policy is set, select the enforcement action for non-compliant emails, for example, encrypt, archive, block, review, copy, or quarantine.

### Groups

The last step is to choose the groups to which the policy applies. The policy can be applied to the entire organization or just a department, group, or individual.

**Add Outbound Compliance Filter** [Close]

Enable this Compliance Filter:  [Help]

If **All** of the conditions are met:

Message Part: **Subject & Body** Matching: **With Specific Word(s)**

Search Value: **Medical Terms** **Social Security**

Use Dictionary  Use Record Match

Match Case  Intelligent Attachment Matching  Disguised text ID

Perform the following actions:

Action: **Issue Email Notifica..**  And stop processing policy filters.

From: \_\_\_\_\_

Subject: \_\_\_\_\_

Message Text: \_\_\_\_\_

Compliance Name and Group

Compliance Name: \_\_\_\_\_

Apply this compliance to: **HR**
